Moderation Logs

Review interview experiences marked as Medium or High Risk.

High Risk (12) Medium Risk (8)	
 Marcus Thorne STU-2028-042 HIGH RISK The candidate's technical responses showed significant deviation from previous sessions. Possible external assistance suspected based on visual cues and response latency. <i>Reported 2h ago</i>	
 Lila Vance STU-2028-109 HIGH RISK Persistent background noise and audio artifacts that align with real-time communication tools being used concurrently. Needs manual review of the session recording. <i>Reported 5h ago</i>

Resolution Note

Reason for your decision...

Approve Experience

Reject Experience

Incident Analysis

Response Latency Spike

The system detected that for questions labeled as "Complex" (e.g., Dynamic Programming), the candidate began typing comprehensive solutions within 0.4 seconds of the question being displayed.

CONFIDENCE SCORE: 98% Match for AI Copy-Paste

Gaze Tracking Anomaly

During the 15-20 minute mark, the candidate's gaze was tracked to be off-screen for 70% of the duration while simultaneously producing 40 lines of error-free code.

Transcript Snippet

[00:15:22] INTERVIEWER: How would you optimize the current knapsack solution for space?

[00:15:23] CANDIDATE: To optimize for space, we can use a 1D array instead of a 2D table because the current row only depends on the previous row. Specifically, `dp[w] = max(dp[w], dp[w - weight[i]] + value[i])...`

Historical Context

This candidate has 0 previous moderation flags across 4 prior sessions.
